

QEW1 Job Safety Plan

Use only for work on equipment with source voltage up to 300 VAC and non-hazardous switching

, , , , , ,	14. h 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	
Person In Charge:		
Date:	Work Location (Building/Room):	
Overall Scope of Work:		
Key Steps:		
1	Define Scope of Work	
2		Analyze the Hazards
3	Feedback	M
4	Improvement	k Safety!
5		Develop/ Implement Controls
6	Perform Work	
7		
Complete each item be	low and perform job briefing before beginning work	
1. PPE and Tool Inspect	ion Checklist	See Field Guides
(Check each item after insp	pection):	
Safety glasses (ANSI Z87	7) Non-melting clothing to include long pants and	long sleeves
Non-melting safety foot	wear that fully covers the feet Remove Conduct	ive Articles
Shock protection gloves	Insulated tools CAT/NRTL Multim	eter
2. Modes Of Work		
Equipment Location/Name	y:	
(Check all that apply):		
Mode 0 – Electrically Sa	fe Work Condition	
Mode 1 – LOTO & Zero	Voltage Verification (ZVV)	
Mode 2 – Energized Dia	gnostics (Testing & Troubleshooting)	

3. Conditions for Normal Operation - (must check all boxes for Normal Condition): Properly installed Properly installed Properly maintained (call Facilities Engineering if needed) Used per listing/labeling All covers/doors on and bolted/latched No signs of impending failure Not energizing equipment for first time or after electrical repair 4. Switching See Field Guide 9 Switch Location/Name: Leather glove and safety glasses required Conditions for Non-Hazardous Switching (select one): Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) See Field Guide 4 Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? If none of these apply, STOP WORK. Arc Flash Hazard may be present				
Properly maintained (call Facilities Engineering if needed) Used per listing/labeling All covers/doors on and bolted/latched No signs of impending failure Not energizing equipment for first time or after electrical repair 4. Switching Switch Location/Name: Leather glove and safety glasses required Conditions for Non-Hazardous Switching (select one): Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? If none of these apply, STOP WORK. Arc Flash Hazard may be precent				
Used per listing/labeling All covers/doors on and bolted/latched No signs of impending failure Not energizing equipment for first time or after electrical repair 4. Switching See Field Guide 9 Switch Location/Name: Leather glove and safety glasses required Conditions for Non-Hazardous Switching (select one): Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC and incident energy less than 4 cal/cm2? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Lord and plug with less than 100 A rated input? If none of these apply, STOP WORK.				
All covers/doors on and bolted/latched are not met Not signs of impending failure				
All covers/doors on and bolted/latched No signs of impending failure Not energizing equipment for first time or after electrical repair A. Switching See Field Guide 9 Switch Location/Name: Leather glove and safety glasses required Conditions for Non-Hazardous Switching (select one): Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC and incident energy less than 4 cal/cm2? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) See Field Guide 4 Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)?				
A. Switching See Field Guide 9 Switch Location/Name: Leather glove and safety glasses required Conditions for Non-Hazardous Switching (select one): Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC, no AF label, 60 Amps or less? See Field Guide 4 Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Restricted Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? If none of these apply, STOP WORK. Arc Flash Hazard may be present				
4. Switching Switch Location/Name: Leather glove and safety glasses required Conditions for Non-Hazardous Switching (select one): Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC and incident energy less than 4 cal/cm2? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? If none of these apply, STOP WORK. Arc Flash Hazard may be present				
Conditions for Non-Hazardous Switching (select one): Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC and incident energy less than 4 cal/cm2? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? If none of these apply, STOP WORK. Arc Flash Hazard may be prosent				
Conditions for Non-Hazardous Switching (select one): Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC and incident energy less than 4 cal/cm2? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) See Field Guide 4 Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) Are Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Less than 250 VAC and incident Energy less than 1.2 cal/cm2 at 18 inches? If none of these apply, STOP WORK.				
Less than 250 VAC and Normal Operating Condition? Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC and incident energy less than 4 cal/cm2? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? If none of these apply, STOP WORK. Arc Flash Hazard may be present				
Less than 250 VAC and incident energy less than 4 cal/cm2 and energizing for first time or after repair? Greater than 250 VAC and incident energy less than 4 cal/cm2? Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? If none of these apply, STOP WORK. Are Flash Hazard may be present				
Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) See Field Guide 4 Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? If none of these apply, STOP WORK. Arc Flash Hazard may be present				
Greater than 250 VAC, no AF label, 60 Amps or less? 5. Shock Risk Assessment (SRA) Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)?				
5. Shock Risk Assessment (SRA) Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
Exposure to live parts? YES NO (if "NO", skip rest of section) Highest exposure voltage? AC DC Other Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)?				
Highest exposure voltage? AC DC Other Buarded, or insulated Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? If none of these apply, STOP WORK. Arc Flash Hazard may be present				
Limited Approach Boundary (LAB) is 42 inches for all QEW1 AC work, or DC Boundary Table: Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
Restricted Approach Boundary (RAB)? 3 inches (< 150 VAC), 12 inches, or DC Boundary Table: RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
RAB Requirements: QEW only - Shock PPE required - Insulated tools required - Remove conductive articles Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
Shock Protection Glove Class required? 00 0 1 2 3 Use Class 0 gloves up to 1000 VAC and 1500 VDC 6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
6. Arc Flash Risk Assessment (AFRA) for Any Equipment less than 300 VAC Input Voltage Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
Conditions for No Arc Flash Hazard (select one) AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
AF Sticker with Incident Energy less than 1.2 cal/cm2 at 18 inches? Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
Cord and plug with less than 100 A rated input? 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
If none of these apply, STOP WORK. 120 VAC (not in a 208 VAC panel)? Arc Flash Hazard may be present				
120 VAC (not in a 208 VAC panel)?				
277 VAC, single phase (not in a 480 VAC panel)?				
At least two circuit breakers or fuses are installed between the equipment and the closest upstream transformer?				
Available fault current is less than 2000 A?				
Visual Inspection with panels removed while equipment is deenergized and outside of LAB?				

7. Capacitor Risk Assessment	See Field Guide 16				
Greater than 100 V and more than 10 Joul	es? If yes, work requires a Compl	ex LOTO Procedure			
Capacitor Bus Voltage					
Capacitor Total Stored Energy					
Discharge Wait Time					
8. Type of LOTO		See LOTO Guide			
Cord and Plug (cord-and-plug equipmer	nt with no hazardous stored energy)				
Simple (one energy source, lockable fro does not create hazards for others)	m a single isolation, no hazardous stored energ	y; locking it out			
Complex LOTO CLP#	(Required for stored hazardous energy or	multiple isolations)			
LOTO Permit LP#	(Required for subcontractors)				
9. Second Person		See Field Guide 10			
Second Person not required for AC line and there is no arc-flash hazard. Hazard	voltage hazards up to 300 VAC if shock protecti Class 1.2a and 1.2b.	on gloves are worn			
	Second person required for DC Hazard, Capacitor Hazard, or Sub-RF hazard classes 2.2b, 2.2c, 3.2b, 3.2c, 6.2f. Second Person Requires Supervisor or Work Lead approval.				
10. Environmental Conditions					
Insufficient lighting	Requires Supplemental Lighting				
Wet location	Can you perform the work safely today?				
Confined space	Requires Confined Space Permit				
Insufficient/cramped/awkward space	Develop escape or rescue plan. May require a	second person.			
Heavy traffic	Requires Barricade Tape or Attendants				
Fall hazard	Requires Approved Fall Matrix				
Lookalike equipment	Requires Flagging and Blocking				
Noisy environment	Turn off loud equipment or ensure communication is feasible				
Time Sensitive	Use STAR method (see last page of JSP)				
11. Error Precursors					
Review Error Precursors at end of JSP and	identify any mitigations:				
1					
2					
3					
4.					
5					

12. Emergency Plan			See I	Emergency Response		
Nearest landline location: Call 911 from an LBL landline phone						
Sufficient cell phone sig	Sufficient cell phone signal? Call 510-486-6999 from cell phone for LBL response					
Clear exit path?	Clear exit path? AED nearby? Location					
Fire extinguisher nearb	y? Location					
Contact release method	d available: Switch or C	ircuit Breaker Rescue Hook	Sho	ock Gloves		
Second person identifie	ed, trained and briefed?					
13. Control of Work Ar	ea			See Field Guide 12		
Barricade Tape or Attendar		le 0: NOTICE Barricade Ta	pe or S	Signs to join		
NOTICE	LOT					
WARNING		Mode 1: WARNING Ba Greater Required For				
DANGER (Mandatory fo	or Mode 2 work)			rricade Tape at		
Attendants briefed and	in place	42" or Greater		the state of the s		
14. Perform a Job Briefing				See Field Guide 6

Error Precursors

Task Demands

- 1. Time Pressure (in a hurry)
- 2. High workload (large memory)
- 3. Simultaneous, multiple actions
- 4. Repetitive actions / Monotony
- 5. Irreversible actionsa
- 6. Interpretation requirements
- 7. Unclear goals, roles, or responsibilities
- 8. Lack of or unclear standards

Work Environment

- 1. Distractions / Interruptions
- 2. Changes / Departure from routine
- 3. Confusing displays or controls
- 4. Work-arounds / OOS Instrumentation
- 5. Hidden system / equipment response
- 6. Unexpected equipment conditions
- 7. Lack of alternative indication
- 8. Personality conflict

Individual Capabilities

- 1. Unfamiliarity with task / First time
- 2. Lack of knowledge (faulty mental model)
- 3. New techniques not used before
- 4. Imprecise communication habits
- 5. Lack of proficiency / Inexperience
- 6. Indistinct problem-solving skills
- 7. Unsafe attitudes
- 8. Illness or fatigue; general poor health or injury

Human Nature

- 1. Stress
- 2. Habit patterns
- 3. Assumptions
- 4. Complacency / Overconfidence
- 5. Mind-set (intentions)
- 6. Inaccurate risk perception
- 7. Mental shortcuts or biases
- 8. Limited short-term memory

Error Mitigations

 Reduce overall risk upfront

	☐ lden	tily ways to av	olu rellal	ice on PPE and	move u	ip the merar	City Of	controis.
2.	Develop	and adhere to	o a writte	en Electrical Saf	e Work	Plan.		

- ☐ Step-by-step procedure read, outcome understood.
- ☐ Circle the task to be performed, check off each task as it is completed.
 - Assign person to manage the procedure

3. Self-check with verbalization.

- ☐ Stop, Think, Act, Review (STAR).
- ☐ Verbalize intent before, during, and after each task.

4. Establish clear communications.

- ☐ Limit unnecessary chatter, move bystanders away.
- ☐ Shutdown/slow down noise-producing machinery.
- ☐ Use three-way communication methods: verbal repeat back of all procedure steps before execution, and verbal confirmation that each step is complete.
- ☐ Use of the phonetic alphabet for clarity.

5. Stop when unsure.

- ☐ Verify initial conditions prior to starting a procedure, and final conditions at the end.
- ☐ Establish hold points to verify conditions.
- ☐ Stop and obtain further direction when unable to follow a procedure or process step or if something unexpected occurs.
- ☐ Maintain a questioning attitude.

6. Flagging and Blocking.

- ☐ Identify (flag) equipment and controls that will be operated or opened.
- ☐ Prevent access (block) to equipment and controls that should not be operated or opened.

STAR Method

STAR is an acronym people use to help them remember to slow down and concentrate on an important action or task. STAR stands for Stop, Think, Act, Review.

- 1. Stop Pause.
 - Pause before performing critical activities.
 - Eliminate distractions and focus on the activity.
- 2. **Think** Understand what is to be done before performing actions.
 - Understand what will happen when correct action is taken on the correct component.
 - Verify that conditions match those discussed during the pre-job briefing.
 - Verify that the action is appropriate, given the equipment status.
 - Identify expected outputs/results of the action.
 - Compare conditions to the controlling document.
 - Consider a contingency if an unexpected result occurs.
 - If uncertain, use the questioning-attitude (FACTS) tool.
- 3. **Act** Perform the correct action on the correct component.
 - Follow relevant guidance (procedure, policy, and other guidance).
 - Without losing eye contact with the component, read and touch the component label.
 - Compare the component label with the guiding document.
 - Perform planned actions for the specific activity.
- 4. **Review** Verify anticipated result is obtained.
 - Verify that outputs or results match the expected outputs/results.
 - Perform the contingency, if the expected result does not occur.
 - Notify supervisor, as needed.
